

# LANDS' END KIDS

## shoe size chart

### important!

For an accurate fit, please read carefully:

**Windows users:** click on your printer icon. Make sure Page Scaling is set to "None" and Auto-rotate and Center boxes are checked.

**Mac users:** In Setup, make sure Scale is set to 100% and "Scale to fit" is **not** checked. Page Orientation should be set to Portrait.

**Accuracy check!** Before using, measure the chart with a ruler at the check line (shown far right); it should be 10 inches from end to end.

### check size.

Measure bare feet or keep socks/tights on if that's how the shoes will be worn.

While standing, place heel where directed (touching but not covering the blue line).

Always measure both feet to the longest toe and order the Lands' End® size that fits the larger foot best.

### need a wide?

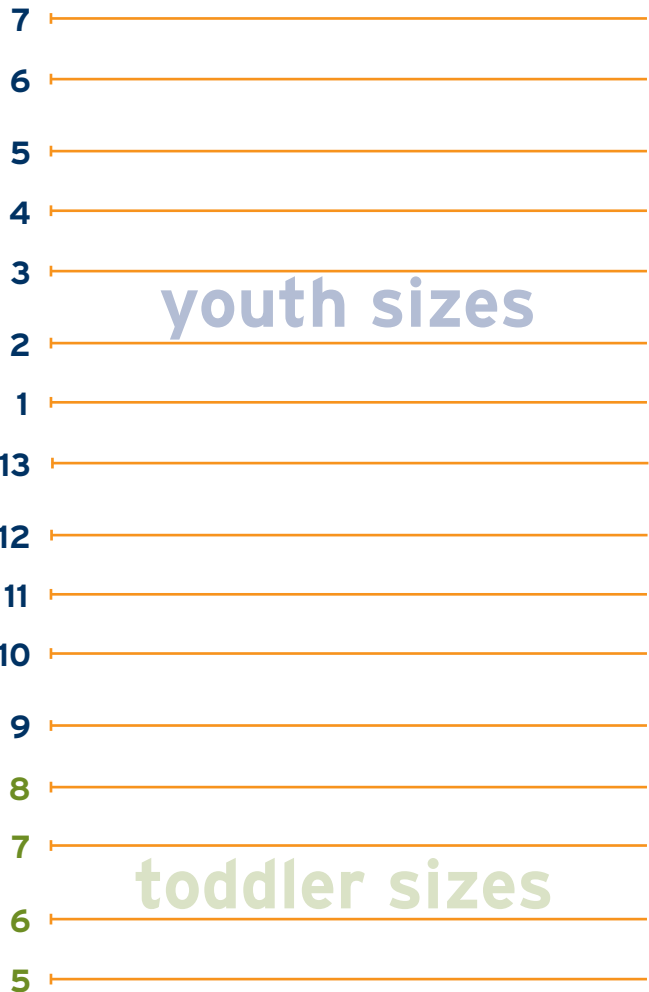

Your child might need a wide fit if our regular shoe length fits fine but pinches at the sides or **on top** of the foot.

**cut** along the dotted line to remove the yellow tape measure. Now, with your child standing and facing you:

**wrap** the tape measure around the **widest part** of their foot (typically the ball area, below the toes).

**line up** the arrow with your child's shoe size. If you **can't** get them to meet (by more than a size) consider a wide fit. If they line up easily, or overlap, order a regular size.

kids feet grow fast.  
measure every time you order.

Lands' End shoe size:

to order:  
call 1-800-800-5800  
or go to [landsend.com](http://landsend.com)

accuracy check: this line should measure 10 inches end to end

cut here

Line up the arrow with your child's shoe size.  
If the two **don't** meet, order a wide.
